

## Removable Bollards - Monobloc Generation 6 Range

### Monobloc Range

*In compliance with France's NF P98-310 standard*

Resistance	Weight
Depends on nature of embedding	44.09 to 110.23 lbs
Material	Thickness >>
Cast Iron or Cast Steel, depending on model – Vendôme: PG220 Stainless Steel	0.4331in (Vendôme: 0.0787 in)

### DESCRIPTION

The « Generation 6 » Monobloc® removable bollard is available in diam. 4"72 for a height of 19"68 and 29"52 above ground level, as well as in diam. 7"87 and 9"84 for a height of 19"68 above ground level (except for Vendôme's).

The top may be circled with a reflective tape band (on option). These bollards average 0"43 in thickness; they are coated with thermosetting polyester powder paint.

The Chateaneuf bollard is also available with a rounded top; diam. 4"72, height above ground level of 21"65, 29"52 and 37"40.

The Vendôme bollard is in stainless steel with PG220 finishing, >< 0"078. It exists with a diameter of 6"10 and 8"66 for a height above ground level of 19"68 and 29"52.

The Fixator®, patented by Urbaco, is a device which makes fixed bollards and posts (manually) removable. With the turn of a key, the bollard unlocks and can be removed from the Fixator® socket. Finally, just place the cover over the emptied socket to leave.

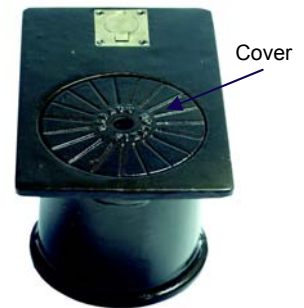

Access control in 3 steps:

1. Unlock
2. Turn
3. Lift

For a small budget, a simple and efficient solution to control access to a site which does not need frequent opening.

The Fixator® is embedded in concrete up to the rectangular part (upper part). Resistance to shock and impacts therefore largely depends on how firmly the Fixator® is anchored into the ground.

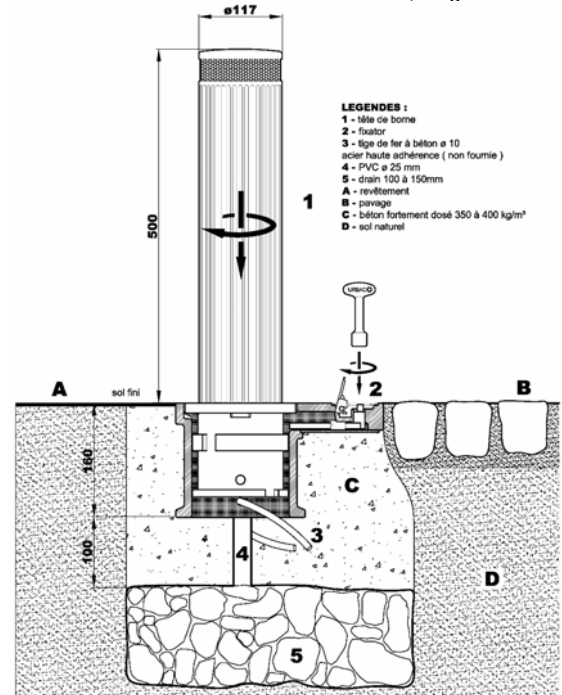

The Fixator® (with or without its cover) and the bollard are sold separately.

Fixator® with key

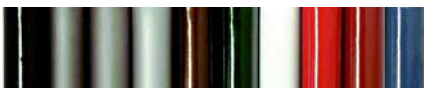

### INSTALLATION PLAN

e.g.: Bollard, diam. 4"72, height 19"68.

Acropole bollard head
